Anton Kasian

Frontend / Game Developer (TypeScript · PixiJS · Canvas/WebGL)

Helsinki, Finland | 1antonkasyan@gmail.com | Telegram: @Anton_Kasyan | LinkedIn Profile | GitHub Profile

Professional Summary

Software Engineer with 3+ years of commercial development experience, specializing in **TypeScript, PixiJS, and GSAP** for interactive browser-based 2D games and WebGL applications. Experienced in designing modular game architectures (FSM, Object Pooling), reel-spinning slot mechanics, complex animations, and mobile performance optimization. Strong engineering background as a Team Lead, with hands-on expertise in OOP, REST APIs, CI/CD, and delivering high-load web content inside mobile WebViews.

Featured Game Projects

Slot Machine Engine — *TypeScript, PixiJS, GSAP, Vite, HTML5 Canvas* | Live Demo

- Developed a modular, standalone 2D slot machine web client designed for modern iGaming integrations.
- Implemented core reel-spinning mechanics, payline calculation algorithms, dynamic symbol generation, and a Finite State Machine (FSM) for predictable game flow.
- Designed dynamic reel decelerations, UI transitions, and win-celebration animations using **GSAP (GreenSock)** and PixiJS tickers.
- Optimized sprite atlases (TexturePacker), memory footprint, and responsive UI scaling for mobile and desktop viewports.

2D Action Platformer (Contra) — *TypeScript, PixiJS, Vite, HTML5 Canvas* | Live Demo

- Built a fast-paced 2D browser platformer focusing on game physics, object lifecycle, and real-time state management.
- Implemented custom collision detection, projectile physics, and enemy AI behavior.
- Applied the **Object Pooling** pattern for particle systems and active entities to maintain a stable 60 FPS under heavy rendering load.

Commercial Experience

Team Lead / Senior Software Engineer

Solid Apps LLC — Remote | **April 2024 – Present**

- Led a team of 3 software engineers, conducting code reviews, sprint planning, architectural decisions, and onboarding.
- Engineered and maintained production web services and interactive paywall/subscription flows for mobile and web applications.

- Optimized web content loading, asset caching, and responsive layouts for smooth integration inside embedded mobile viewports (WKWebView).
- Integrated REST APIs, Firebase Analytics, AppsFlyer attribution, and automated release deployment via CI/CD pipelines (Codemagic).

Applications in AppStore

Software Engineer (iOS / Mobile)

Effective Mobile — Remote | **October 2023 – April 2024**

- Developed core features for a commercial mobile application using Swift and UIKit in an agile environment.
- Migrated local data persistence layer from CoreData to Realm, significantly improving query efficiency and app stability.
- Refactored UI modules and integrated Combine framework for asynchronous data streams and reactive state handling.

Technical Skills

- **Frontend & Game Development:** TypeScript, JavaScript (ES6+), PixiJS, **GSAP (GreenSock)**, HTML5 Canvas, WebGL API, Vite, CSS3, Sprite Atlases / TexturePacker, Spine 2D (basics).
- **Game Architecture & Patterns:** Finite State Machine (FSM), Game Loop, Object Pooling, Event-Driven Architecture, Component-Based Design.
- **Mobile & Web Integration:** WebKit / WebView performance & optimization, Cross-browser Compatibility, Swift, REST APIs, JSON.
- **Tools & Infrastructure:** Git, GitHub Pages, CI/CD (Codemagic), Firebase, AppsFlyer, Figma, Vite.

Education

Bachelor’s Degree in Engineering

Saint Petersburg State University of Railway Engineering | 2016 – 2021

Languages

- **English:** Fluent
- **Russian:** Native
- **Finnish:** A1 (Basic)
